

IN THE CLAIMS:

None of the claims are amended herein. However, for the convenience of the Examiner, all the pending claims are reproduced below.

1. (previously presented) A method, comprising:
receiving electronic entity events for exchange transactions between first and second parties serviced by a third party; and
dynamically and automatically, by a computer, pricing servicing of the events by the third party responsive to an electronic entity event pricing plan where the pricing is based on a collection of the exchange transactions.
2. (previously presented) A method as recited in claim 1, wherein the event comprises one of a transaction with a good/service exchanged as part of the transaction, multiple transactions with goods/services, a product query, an advertisement review, transferring to another site, an exchange subscription fee, or a customer characteristic.
3. (original) A method as recited in claim 1, wherein the pricing is responsive to relationships among buyers and sellers comprising negotiated customer specific rates and discounts.
4. (original) A method as recited in claim 1, wherein the dynamic pricing plan uses a decision network having rule based functions.
5. (original) A method as recited in claim 4, wherein said functions price the transaction across goods/services.
6. (original) A method as recited in claim 4, wherein the rules based functions comprise conditional decisions.
7. (original) A method as recited in claim 4, wherein the rules based functions comprise pricing calculation algorithms.

8. (previously presented) A method as recited in claim 7, wherein the algorithms comprise one of single unit, double unit, taper discount, tier, tier discount, percent, flat, charge, minimum, maximum, accumulation, threshold, multi-unit or taper charges.

9. (original) A method as recited in claim 1, wherein said electronic event has a transaction price and a good/service price.

10. (original) A method as recited in claim 1, wherein said electronic event comprises multiple transactions.

11. (original) A method as recited in claim 1, wherein the pricing comprises detail and summary pricing.

12. (previously presented) A method associated with an electronic exchange which produces electronic exchange events, said method comprising:

receiving the electronic exchange events for exchange transactions between first and second parties serviced by a third party; and

dynamically and automatically, by a computer, pricing servicing of the electronic exchange events responsive to an electronic exchange event pricing plan where the pricing is based on a collection of the exchange transactions.

13. (previously presented) A method, comprising:

receiving an electronic exchange transaction request;

performing an electronic exchange function responsive to the electronic exchange transaction request; and

dynamically and automatically, by a computer, pricing servicing of electronic exchange events responsive to an electronic exchange event pricing plan where the pricing is based on a collection of the exchange events.

14. (previously presented) A method, comprising:

receiving electronic exchange events; and

dynamically and automatically, by a computer, pricing servicing of the electronic exchange events responsive to an electronic exchange event pricing plan having transaction

pricing, cross product pricing, summary pricing and non-transaction pricing where the pricing is based on a collection of the exchange events.

15. (previously presented) A method, comprising:
receiving electronic exchange transaction requests;
performing electronic exchange functions responsive to the electronic exchange request
and where the function comprises transactions exchanging a goods/services having a
goods/services prices; and
dynamically and automatically, by a computer, pricing servicing of the electronic
exchange transactions with detail and summary pricing using an electronic exchange event
pricing plan responsive to relationships among buyers and sellers and comprising negotiated
customer specific rates and where the dynamic pricing plan uses a decision network having rule
based functions pricing the transactions, pricing across the transactions, pricing across the
goods/services, pricing with charge limitations and pricing non-transactions using conditional
pricing decisions and pricing calculation algorithms comprising single unit, double unit, taper
discount, tier, tier discount, percent, flat, charge, minimum, maximum, accumulation, threshold,
multi-unit and taper charges where the pricing is based on a collection of the exchange
transactions.

16. (previously presented) A system, comprising:
an electronic exchange handling electronic exchange events; and
a pricing mechanism dynamically pricing servicing of the electronic exchange events
responsive to an electronic exchange event pricing plan where the pricing mechanism
comprises a function pricing servicing of the electronic exchange events based on a collection of
the exchange events.

17. (original) A system as recited in claim 16, wherein said pricing mechanism
comprises a code-based pricer and non-code based rules used by the pricer to price the event.

18. (previously presented) A computer readable storage controlling a computer by
dynamically and automatically pricing servicing of electronic exchange events responsive to an
electronic exchange event pricing plan where the pricing is based on a collection of the
exchange events.

19. (previously presented) A method, comprising:
receiving electronic entity events for transactions; and
dynamically and automatically, by a computer, pricing servicing of the events responsive
to an electronic entity event pricing plan where the pricing is based on a collection of the
exchange transactions.
